

Cedar or Green Treat Wood Fences

Cedar Wood:

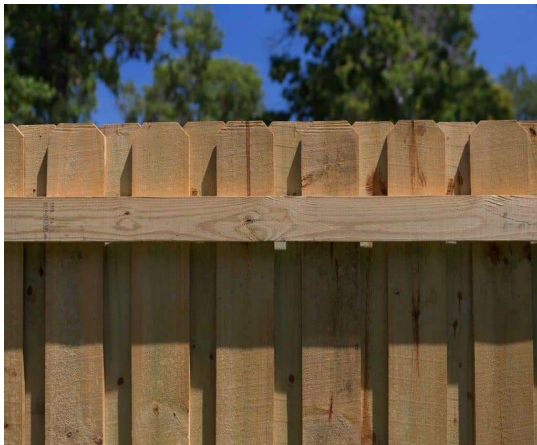

- Warm reddish-brown tones
- Natural oils gives a natural resistance to moisture, decay, and insects
- Requires more staining or sealant to maintain its condition

Green Treat:

- Greenish tint from the chemical preservatives used to make it weather resistant
- Preservative help resist against rot, fungal damage, and termites
- Less expensive than Cedar wood

Cedar or green treat are both still wood and natural products. Both can have cracking, cupping, and discoloration when exposed to outdoor elements such as rain, snow, and sun.
