

No Dig Installation

No Dig Benefits and why its important to you

→ Less mess and clean up

There is minimal disturbing of your soil, excess of soil, or use of concrete. This makes for a much more clean and neat installation process.

→ Greatly reduces frost heave

With driving the posts below the frost line this greatly reduces frost heave.

→ Stronger and more durable

We use a galvanized 2 3/8" SS20 pipe driven 4' into the undisturbed soil. This will provide for a stronger more rigid installation.

→ Faster completion time

This is a clear advantage to our customers. Driving posts saves time vs. digging and waiting for concrete to cure. We have less time time in your personal space and you can start enjoying your fence quicker.

→ Better repairability

If by chance an accident occurs and you need a repair it is an easier repair process. We are able to pull off posts that are sleeved vs. having to dig out footings.
